BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. GAO provided information about the Department of Defenses (DOD) progress in developing and testing the Composite Health Care System (CHCS), which is intended to integrate a wide array of data needed by military physicians and facilities in managing and treating patients. GAO found that: (1) DOD wants to deploy the first phase of CHCS before addressing important capabilities involving the identification, elimination, and prevention of multiple patient records and record archival and retrieval; (2) those capabilities are critical to physician acceptance and use of CHCS and the systems ability to support clinicians inpatient activities; (3) DOD has delayed the incorporation of inpatient order-entry capability until the second phase deployment scheduled for 1994, but faces a major developmental risk in its design and testing; (4) inadequacies in operational test and evaluation (OT and E) planning and implementation yielded inconclusive test results that may not be representative of the environment in which CHCS is to be deployed; (5) DOD is attempting to address 17 fundamental CHCS weaknesses identified in spite of the OT and E inadequacies; (6) CHCS life-cycle costs exceed the congressionally established 1.6-billion ceiling by more than 400 million; and (7) DOD has had difficulty in estimating and validating CHCS benefits, with five recent benefit studies estimating cost savings ranging between 1.7 billion and 3.8 billion. GAO believes that CHCS is not ready for deployment, since major deficiencies still exist in system capabilities and the scope and quality of testing have been inadequate. This item ships from La Vergne, TN. Paperback.
