

Monitoramento de mamíferos com câmeras-trapps em área manejada

By Sheliane Nascimento

Novas Edições Acadêmicas Jun 2016, 2016. Taschenbuch. Book Condition: Neu. 220x150x4 mm. This item is printed on demand - Print on Demand Neuware - A grande potencialidade da exploração florestal manejada na Amazônia torna urgente a definição de métodos e espécies indicadores à avaliação de seu impacto a cada dia. O uso de câmeras-trapps é promissor nesse tipo de estudo, pois gera dados irrefutáveis de ocorrência de espécies críticas. A FLONA do Jamari possui área de 220.000ha; e atualmente três empresas exploram madeira de forma manejada. Este trabalho objetivou avaliar o impacto dessa exploração sobre os mamíferos de médio e grande porte, utilizando armadilhas-fotográficas. O delineamento amostral abrangeu duas áreas: controle e tratamento, esta sob exploração denominada 'Madeflona'. Os dados foram coletados durante 4 expedições realizadas durante os anos de 2011 e 2012, com levantamento de mamíferos de médio e grande porte, bem como também de algumas aves cinegéticas, avaliando assim o grau de impacto ambiental em áreas reflorestadas após a atividade de manejo. 60 pp. Portugiesisch.
